On Board Logging Released!
NepTune RTP Demon Update

Yesterday a major update was released for the NepTune RTP system and the Demon in general. The New Demon firmware now supports On Board Logging which has been released as a new feature of the NepTune RTP software. Each Demon has a 1MB chip for On Board Logging and can store up to 3 hours of data with compression enabled! The NepTune RTP Software also has these great updates available in the latest edition of the software:

Changes
-Rewritten Datalog Loading, automatically sets up a datalog for playback when it's loaded. No longer disconnects from the RTP.
-Datalog Scrub Through feature now automatically scrubs through when you start to drag on a datalog graph. No need to click play and pause anymore.
-Automatic setup of TPS Tip-In and Cranking Trims when you change injector sizing.

Added features
-Live Graphing
-On Board Logging is fully released. Also offers compression to allow 3 to 5 times the data to be recorded. Requires a Demon and the latest firmware package. Details in help.
-Anti-Theft feature requires inputs or a code to be entered with TPS and Brake pedal. Also has a valet/fallback mode with adjustable rev limit.
-Logging of Short Term and Long Term O2 trims.
-Logging of Anti-Theft, On Board Active, and Ignition Cut.
-Access To Idle Ignition Adjustments with disable option.
-Access To Stock Ignition Limitation Parameters with disable option.
-Access To Ignition Dwell Control.
-Access To Tip-In Ignition Adjustments.
-PWM Boost Control Hold Duty Until Load for quick spool. Duty and Load are adjustable.
-VSS Disable for Fan Control.
-VSS Disable for Fuel Cut.
-Adjustable Prime Duration at key on.
-Overheat Protection with lower rev limit and code 11 trigger.
-Closed Loop has been rewritten with selectable O2 input, conditions, and wideband features.
-Rev Limits per gear.
-MIL Shiftlights per gear.
